Programs, Initiatives, and Schools that Support Women in Construction

Although there has been a massive push to bring more women into the construction industry, women in construction currently only make up roughly 10% of the workforce. Many of these roles are managerial, with very few women working onsite or in the trades. In fact, only half of the 40 trades listed under construction categories currently have enough women employed to even register a meaningful percentage within official records.

Several factors have influenced these statistics over the years, but one way to grow these numbers is to provide more educational resources for the current and future generations of women in construction. From universities with construction and engineering focuses, to initiatives that push for providing women and young girls with opportunities to succeed in traditionally male-dominated fields, there has never been a better time for women to join the construction industry.

Industry Update

61 transportation funding measures introduced by 25 states

Nearly 30% of the proposed bills are for one-time funding. Bond issues for state department of transportation funding have become an increasing source of revenue for highway projects, as toll fees accounted for less of the funding pie since 2000, according to the BATIC Institute.

How would a $15 minimum wage affect construction?

An increase in the federal minimum wage would mean that construction employers in some states would have to pay more for some types of labor.
